

**Oxamyl analysis is available at Eclipse**

*LCMS technology used to detect oxamyl to meet legal requirements*

The removal of approval for use of some nematocides and the lowering of the Maximum Residue Limit (MRL) for oxamyl in potatoes, led to an increase in the number of MRL exceedances during 2008.

At Eclipse we have developed a fast reliable procedure that gives you the confidence that your potatoes comply with the tightened legislation.

Using a LCMSMS procedure Eclipse can confidently quantify oxamyl (Vydate) down to levels of 0.01mg/kg. Fast track turnarounds are available and rates for services are negotiable based on numbers of samples and service required.
